

What people are saying about **Thermal Techniques**:

- “You found more than we expected and in a much shorter time than we anticipated”
- “Every bearing you reported to us was in fact failing.”
- “Thermal Techniques saves us over \$20,000.00 worth of downtime per year”
- “Because of your report we were able to get the manufacture of those breakers to replace them at no charge. This represents over \$6000.00 in real dollars and more than that in potential lost production time.”
- “The power company agreed with your findings. We were close to losing all incoming power.”
- “We thought you were nuts! But that new 3000 amp breaker had loose internal components as you predicted.”
- “That one loose connection on that contactor more than justified your trip to our plant”
- “After two inspections our incinerator run time has improved from under 83% to over 96%”
- “Having you come in is some of the best money we spend in our maintenance department”
- “Our insurance company is very pleased that we have our plant inspected by you.”
- “After the design team saw your report they realized that those hot capacitors were undersized.”
- “We appreciate the way you care about our plant.”
- “We have used others in the past but as long as you are available we will use you.”
- “Our maintenance people actually enjoy finding the problems before damage is done.”

Let **Thermal Techniques** become an extention of your maintenance and engineering staff.
